

Sembcorp Marine's Brazilian Shipyard Completes Petrobras P-71 FPSO

Estaleiro Jurong Aracruz achieves milestone with delivery of second FPSO modules fabrication and integration project

Singapore, 18 October 2022 – Sembcorp Marine Ltd (the “**Company**”), through its wholly-owned and operated subsidiary Estaleiro Jurong Aracruz (EJA) has crossed another significant operational milestone with the completion of P-71, its second floating, production, storage and offloading (FPSO) vessel project for Tupi B.V.

A newbuild FPSO vessel, P-71 sailed away from EJA's shipyard today and will be deployed to the ultra-deepwater Itapu field in Brazil's Santos Basin. When launched into operation, P-71 will produce up to 150,000 barrels of oil per day (BOPD). Measuring 316m in length and 54m in width, P-71 has a 1.6-million-barrel storage capacity and can accommodate 166 persons.

EJA's P-71 work scope includes fabricating six modules, pipe-racks and a flare, and integrating them on the vessel along with other modules and items supplied by the customer. EJA also executed modification works on the FPSO's topsides and hull to meet Itapu field requirements.

EJA President Mr T. Guhan said: “Despite pandemic-related challenges which affected the project over a period of 20 months, EJA successfully delivered the P-71 FPSO on schedule, cementing its status as a premier facility in Brazil capable of taking on full engineering, procurement, construction and commissioning work for large-scale offshore projects.”

“We thank Petrobras and its partners for choosing to work with us on the P-68 and P-71 FPSO projects. We would also like to recognise our employees, vendors and community leaders whose assistance is important to our continued success. We look forward to many more fruitful collaborations with all our stakeholders.”

EJA Chairman Mr William Goh said: “As a Brazilian shipyard with international expertise and advanced capabilities, we are a major commercial entity and also a part of the social and economic fabric of Espirito Santo and its local communities. We are committed to growing our business here by providing world-class engineering solutions for the offshore renewables, oil & gas and other clean energy sectors; and by actively promoting and providing skills development, education and employment opportunities, as well as healthcare and other sustainable outcomes to advance the social and economic progress of the local communities in Aracruz.”

The 82.5ha EJA facility has been operating in the Espirito Santo municipality of Aracruz since 2014 and employs up to 4,500 workers during peak periods of production activities. Besides tapping into the burgeoning local offshore oil and gas industry, EJA, with its strategic location on the east coast of Brazil is able to service field developments in the Atlantic, Gulf of Mexico and West African regions.

About Sembcorp Marine

Sembcorp Marine Ltd provides innovative engineering solutions to the global offshore, marine and energy industries. Headquartered in Singapore, the Group has close to 60 years of track record in the design and construction of rigs, floaters, offshore platforms and specialised vessels, as well as in the repair, upgrading and conversion of different ship types. Sembcorp Marine's solutions focus on the following areas: Renewables, Process, Gas, Ocean Living and Advanced Drilling Rigs.

Sembcorp Marine's customers include major energy companies, owners of floating production units, shipping companies and cruise and ferry operators. They are supported by four commercial units: Rigs & Floaters; Repairs & Upgrades; Offshore Platforms and Specialised Shipbuilding.

Sembcorp Marine operates shipyards and other facilities in Singapore, Indonesia, the United Kingdom, Norway and Brazil.

About Estaleiro Jurong Aracruz

Estaleiro Jurong Aracruz (EJA), Sembcorp Marine's wholly-owned integrated shipyard in Brazil, is located on an 82.5ha site with a 1.6km long coastline in Aracruz, a municipality of the state of Espirito Santo.

The shipyard commenced operations in the second half of 2014. It has a 1km long berthing quay with water depth of up to 15.5m, ancillary piping facilities, a steel fabrication workshop with a 4,000-tonne monthly production capacity, and cranes with lifting capacity of up to 3,600 tonnes.

EJA undertakes:

- Construction of drillships, semi-submersible and jack-up rigs, platforms and supply vessels;
- Integration of FPSOs;
- Fabrication of topside modules; and
- Repair and modification of drilling rigs and different ship types.
